Understanding Repeatable Read

- Your query will always return the same result within an UOW
- What that means?

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 "select EMPNO, FIRSTNME from employee where FIRSTNME like 'B%' with rr"  
  
EMPNO  FIRSTNME  
-----  
000150 BRUCE  
  
1 record(s) selected.
```

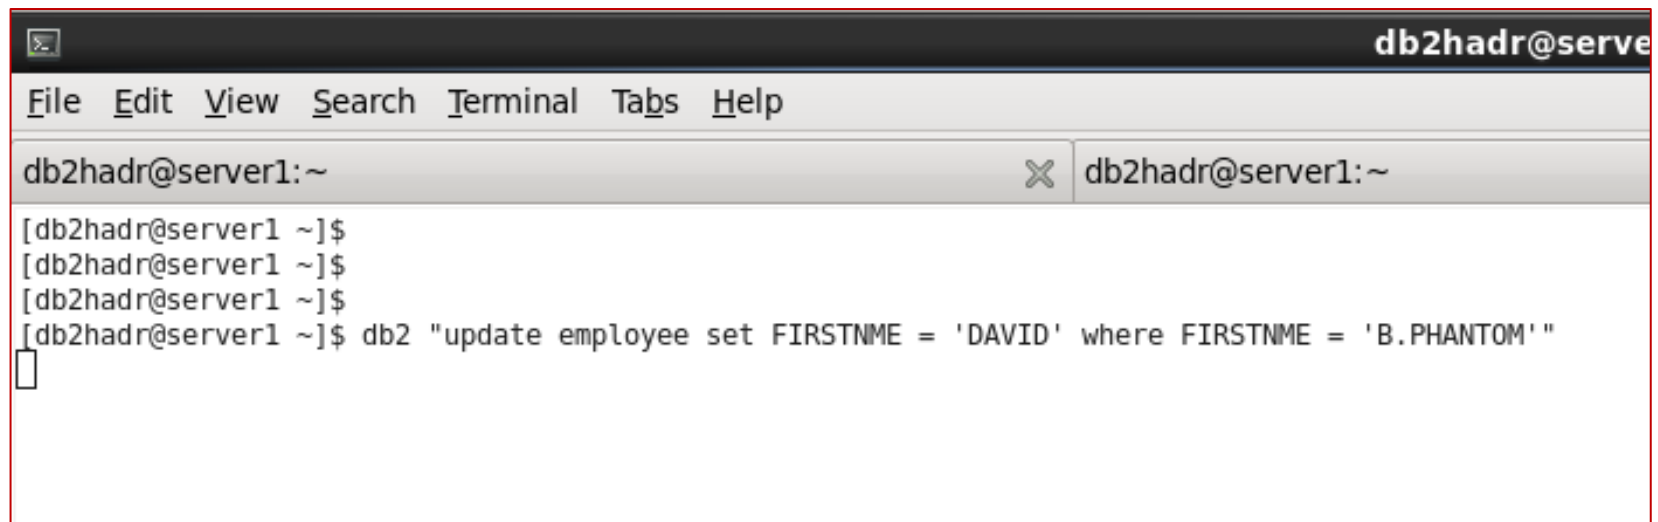

Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
Internal Variation	S	Variation	Granted	2	No	-
Internal Plan	S	Plan	Granted	1	No	-
DB2HADR.EMPLOYEE	S	Table	Granted	2	No	-

Understanding RR

- Lock S (share) – Concurrent applications can only read data
- In this case all the table is locked (that's not the rule)
- Concurrent applications trying to modify the table => **lock waiting**

Understanding RR

- Trying to modify any row on that table leaves the concurrent application in **locking waiting**

A terminal window titled 'db2hadr@server1:~' with a menu bar (File, Edit, View, Search, Terminal, Tabs, Help). The terminal shows a series of prompts and a single command: `db2 "update employee set FIRSTNME = 'DAVID' where FIRSTNME = 'B.PHANTOM'"`. The cursor is at the end of the command line.

Application Status	Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
Lock Waiting	Internal Plan	S	Plan	Granted	1	No	11
Lock Waiting	DB2HADR.EMPLOYEE[0]	IX [S]	Table	-	-	No	11
Lock Waiting	Internal Variation	S	Variation	Granted	1	No	11
UOW Waiting in the application	Internal Plan	S	Plan	Granted	1	Yes	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	S	Table	Granted	1	Yes	-
UOW Waiting in the application	Internal Variation	S	Variation	Granted	1	Yes	-

Improving Performance RR

- Ensure locklist and maxlock (db cfg) have appropriate values
- Creating an index can avoid table scan and lock the entire table
- Frequently commit

Understanding Read Stability

- "The read stability isolation level locks only those rows that an application retrieves during a unit of work"
- What that means ?

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 "select EMPNO,FIRSTNME from employee where FIRSTNME like 'B%' with rs"  
  
EMPNO  FIRSTNME  
-----  
000150 BRUCE  
  
1 record(s) selected.
```

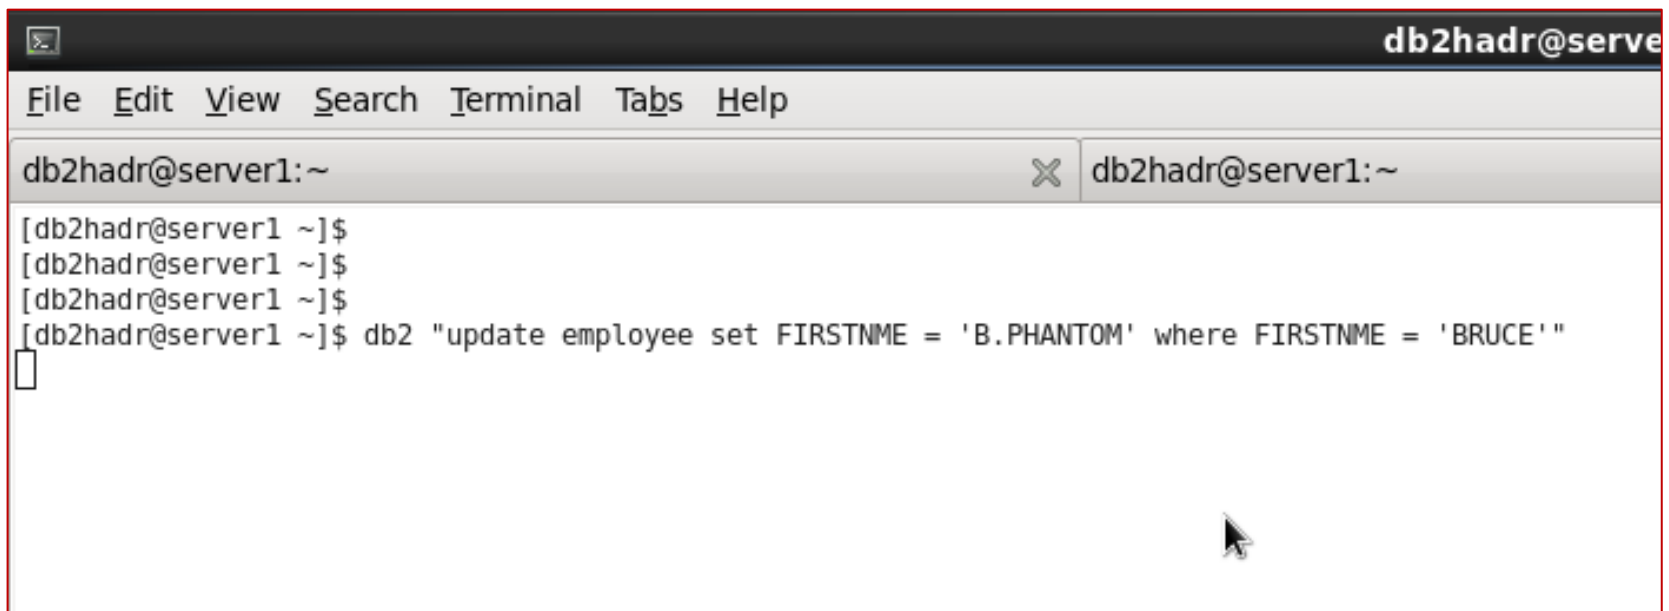

Application Status	Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
UOW Waiting in the application	Internal Plan	S	Plan	Granted	1	No	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	NS	Row	Granted	1	No	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	IS	Table	Granted	1	No	-

Understanding RS

- Lock NS (scan share) – Concurrent applications can only read data
- Lock is on the rows
- Rows returned on the query are locked.
- Concurrent applications trying to modify those rows => **lock waiting**

Understanding RS

- Trying to update a row returned on that query leaves the concurrent updating application in **lock waiting**

A screenshot of a terminal window titled "db2hadr@server1:~". The window shows a series of prompts and a single command: `db2 "update employee set FIRSTNME = 'B.PHANTOM' where FIRSTNME = 'BRUCE'"`. The command is entered but not yet executed, as indicated by the cursor at the end of the line.

Application Status	Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
Lock Waiting	Internal Plan	S	Plan	Granted	1	No	11
Lock Waiting	DB2HADR.EMPLOYEE[0]	X [NS]	Row	-	-	No	11
Lock Waiting	DB2HADR.EMPLOYEE	X	Row	Converting	1	No	11
Lock Waiting	DB2HADR.EMPLOYEE	IX	Table	Granted	1	No	11
Lock Waiting	Internal Variation	S	Variation	Granted	1	No	11
UOW Waiting in the application	Internal Plan	S	Plan	Granted	1	Yes	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	NS	Row	Granted	1	Yes	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	IS	Table	Granted	1	Yes	-

Understanding RS

- Trying to update a row that it was not returned on that query
=> **Phantom Row**

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 'update employee set FIRSTNME = 'B.PHANTOM' where FIRSTNME = 'DAVID''  
DB20000I  The SQL command completed successfully.  
[db2hadr@server1 ~]$
```

Phantom Row !!!

Application Status	Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
UOW Waiting in the application	Internal Plan	S	Plan	Granted	1	No	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	NS	Row	Granted	1	No	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	IS	Table	Granted	1	No	-

Understanding RS

- The same statement in the same UOW

```
db2hadr@server1:~
[db2hadr@server1 ~]$
[db2hadr@server1 ~]$
[db2hadr@server1 ~]$ db2 "select EMPNO, FIRSTNME from employee where FIRSTNME like 'B%' with rs"

EMPNO  FIRSTNME
-----
000150  BRUCE

1 record(s) selected.

[db2hadr@server1 ~]$ db2 "select EMPNO, FIRSTNME from employee where FIRSTNME like 'B%' with rs"

EMPNO  FIRSTNME
-----
000150  BRUCE
000200  B.PHANTOM

2 record(s) selected.

[db2hadr@server1 ~]$
```

Phantom Row !!!

Understanding Cursor Stability

- "The cursor stability isolation level locks any row being accessed during a transaction while the cursor is positioned on that row"
- What ? Why ? How ?

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 "select EMPNO,FIRSTNME from employee where FIRSTNME like 'B%'"  
  
EMPNO  FIRSTNME  
-----  
000150 BRUCE  
  
1 record(s) selected.
```

CS is DB2 default
isolation level

Application Status	Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
UOW Waiting in the application	Internal Plan	S	Plan	Granted	1	No	-

Understanding Uncommitted Read

- "The uncommitted read isolation level allows an application to access the uncommitted changes of other transactions"
- What that means?

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 -m "update employee set FIRSTNME = 'UNCOMMITTED'"  
Number of rows affected : 42  
DB20000I The SQL command completed successfully.  
[db2hadr@server1 ~]$
```

Application Status	Object Name	Lock Mode	Object Type	Lock Status	Lock Count	Is Blocker	Locked By
UOW Waiting in the application	Internal Plan	S	Plan	Granted	1	No	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	X	Row	Granted	42	No	-
UOW Waiting in the application	DB2HADR.EMPLOYEE	IX	Table	Granted	1	No	-

Understanding UR

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 "select EMPNO,FIRSTNME from employee fetch first 10 rows only"  
  
EMPNO  FIRSTNME  
-----  
000010 CHRISTINE  
000020 MICHAEL  
000030 SALLY  
000050 JOHN  
000060 IRVING  
000070 EVA  
000090 EILEEN  
000100 THEODORE  
000110 VINCENZO  
000120 SEAN  
  
10 record(s) selected.  
  
[db2hadr@server1 ~]$ db2 "select EMPNO,FIRSTNME from employee fetch first 10 rows only with ur"  
  
EMPNO  FIRSTNME  
-----  
000010 UNCOMMITTED  
000020 UNCOMMITTED  
000030 UNCOMMITTED  
000050 UNCOMMITTED  
000060 UNCOMMITTED  
000070 UNCOMMITTED  
000090 UNCOMMITTED  
000100 UNCOMMITTED  
000110 UNCOMMITTED  
000120 UNCOMMITTED  
  
10 record(s) selected.
```

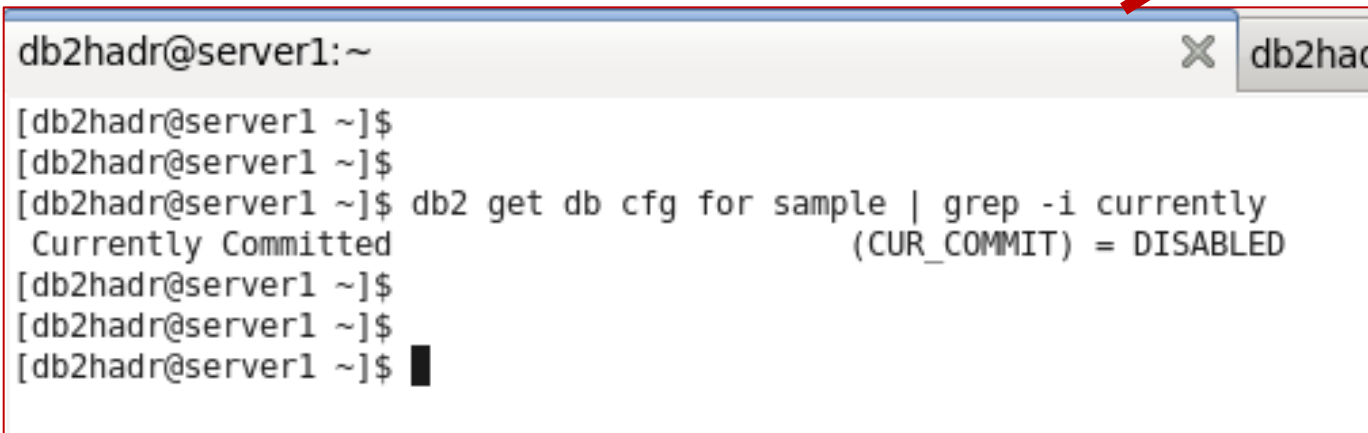

Currently
committed
behavior (CS)

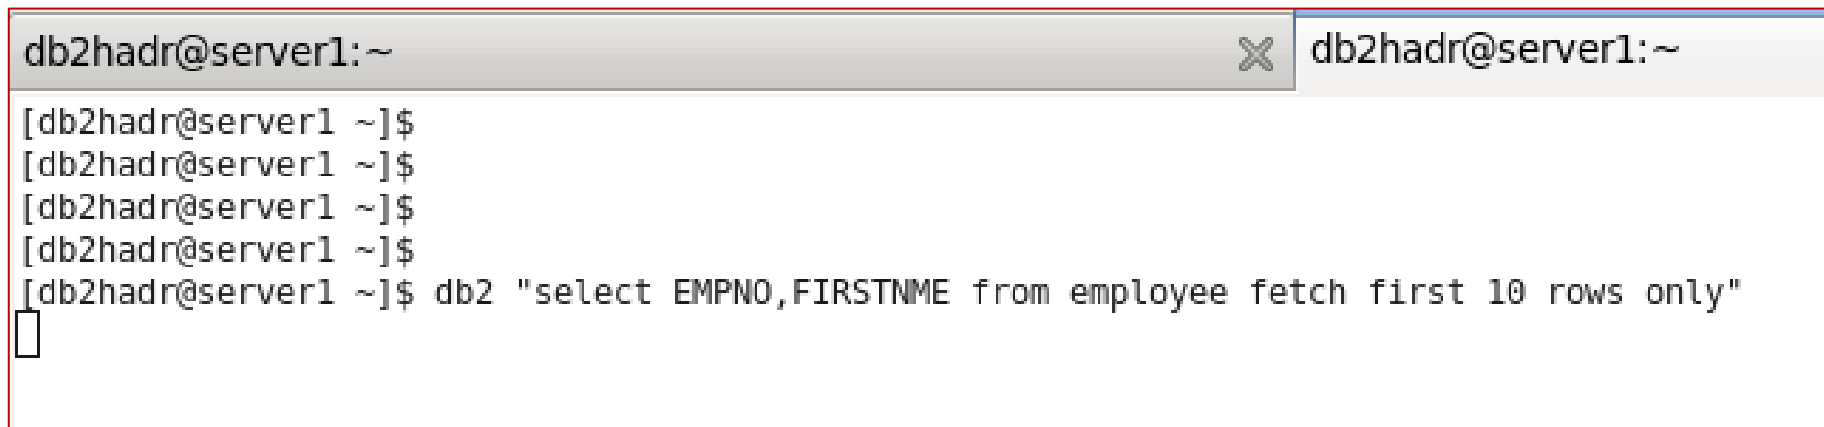

UR

Understanding UR

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 get db cfg for sample | grep -i currently  
Currently Committed (CUR_COMMIT) = DISABLED  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$
```

Currently
committed OFF

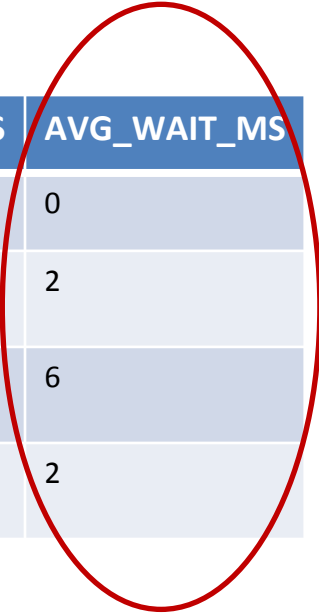

```
db2hadr@server1:~  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$  
[db2hadr@server1 ~]$ db2 "select EMPNO, FIRSTNME from employee fetch first 10 rows only"  
□
```

Lock waiting

```
select substr(ai.appl_name,1,20) as appl_name ,substr(ai.primary_auth_id,1,10) as auth_id
, ap.agent_id as app_handle,ap.lock_waits as lock_waits, ap.lock_wait_time / 1000 as
Total_Wait_S,(ap.lock_wait_time / ap.lock_waits ) as Avg_Wait_ms from
sysibmadm.snapappl_info ai, sysibmadm.snapappl ap where ai.agent_id = ap.agent_id and
ap.lock_waits > 0"
```

APPL_NAME	AUTH_ID	APPL_HANDLE	LOCK_WAITS	TOTAL_WAIT_S	AVG_WAIT_MS
pmrepagent	INFOD	356	3	0	0
pmrepagent	INFOD	537	5	0	2
pmrepagent	INFOD	739	10	0	6
pmrepagent	INFOD	456	13	0	2

Considerations

- A slowness reported by the user could be related to lock
- Choose the best isolation level that fits your business/application requirement
- You can use locktimeout (db cfg) to identify if you have lock problem (return error to the application)

If you enjoyed and learned!!
vote Éric !! 😊
Thank you!
